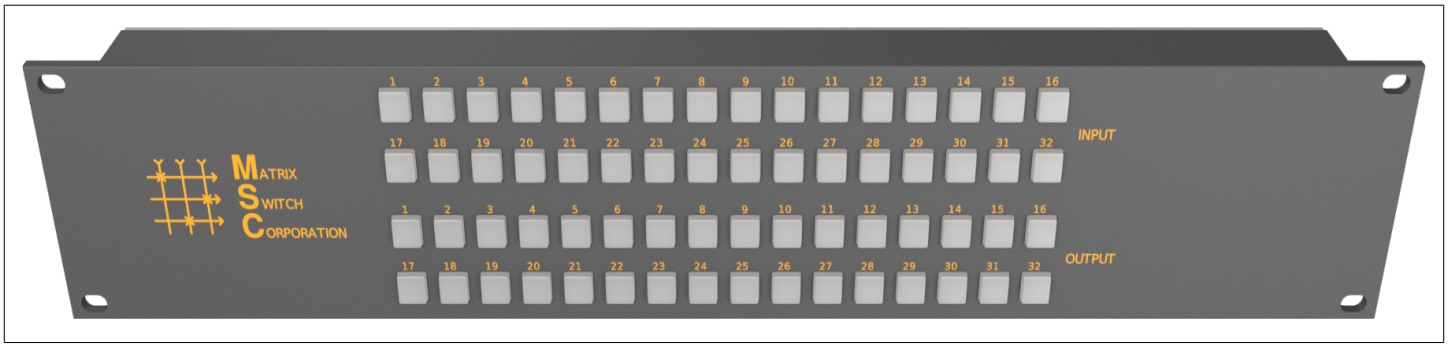
Matrix Switch Corporation
MSC-CP32X32E
32x32 Elastomeric Remote Button Panel



Matrix Switch Corporation remote control panels utilize the TCP/IP protocol over standard Ethernet connected networks, providing high flexibility in installation location, whether located in the same rack as the controlled router or across the world via the Internet.

Many Matrix Switch Corporation button panels are offered in two model variations. Models that end with an 'E' employ individually rear lit rubber elastomeric buttons with excellent tactile feel and high reliability gold contacts. Models ending with 'V' use the same industry standard re-legend-able switches found on the top of the line production switchers.

For applications where video and audio are routed as separate signals the MSC-CP32X32E supports audio breakaway by holding down a video source button followed by pressing desired audio source.

Feature Highlights

- Audio break away support
- Web page configuration interface
- Compatible with Matrix Switch Corporation video routers
- Software updates via Ethernet port
- Backed by a full 2 year manufacturer parts and labor warranty

Additional Features

- Several panels can be used to control the same video/audio router
- Configurable source and destination offsets allow for specifying what portion of the routing matrix a panel will control
- DHCP support for centralized/automatic network configuration

Specifications	
Size	19"W x 3.5"H x 1.5"D
Rack Size	2RU
Weight	3 lbs
Power	5 VDC
Storage Temp	-10 Through +50 Deg C
Operating Temp	0 Through +40 Deg C
Humidity	0 Through 90% Non-Condensing
Warranty	2 Years Parts & Labor
Ethernet	10 Base-T
